

A Mechanism A: amplitude perturbation $\lambda_i^B = \lambda_i^A(1 + 0.4i^{-\alpha_\lambda})$ **B Mechanism B: pure rotation** $\theta_k = \sqrt{0.06} k^{-\alpha_\theta}$, $r=3$, $\Lambda_A = \Lambda_B$ **C Naive exponent artefact vs doubling-tail phase curve****D Joint Feldman-Hajek phase diagram (361 grid points)**
